

Sinclair Oil Lubricants & POLARIS Laboratories Launch Fluid Testing & Analysis Program

FOR IMMEDIATE RELEASE

Salt Lake City, Utah — POLARIS Laboratories™ and Sinclair Oil Lubricants announced the launch of the Sinclair Fluid Analysis Program. POLARIS will provide complete testing and analysis for oils and diesel fuel for the new Sinclair Oil program so that users may identify minor equipment problems before they become major failures. By identifying dirt, wear particles and other contaminants that can cause failure or prematurely shorten equipment life, users can increase equipment reliability and minimize downtime.

“Sinclair Oil is proud to offer a broad spectrum of quality products to its customers,” said Greg Iverson, Sinclair Oil Lubricant Marketing Manager. “A high quality fluid analysis program is one additional way we can offer our lubricant customers solutions that will benefit their businesses. POLARIS provides the technical strength Sinclair customers need to maximize equipment life and effectively manage efficiency.” Iverson added.

POLARIS Laboratories™ is ISO 17025 A2LA accredited — the highest level of quality attainable by a testing laboratory. The accreditation ensures that POLARIS fluid analysis results are accurate, repeatable and traceable to a standard and that all maintenance recommendations are useful and actionable.

“POLARIS Laboratories™ is looking forward to providing Sinclair Oil with a value-added service that complements its well-established commitment to Sinclair customers,” said Brett Minges, POLARIS VP of Sales. “This new partnership will give Sinclair Oil customers a solutions-based approach to maintenance backed by a high quality testing laboratory,” Minges added.

The program also allows Sinclair Oil customers to access test results and laboratory maintenance recommendations quickly using HORIZON®, POLARIS' free, online reporting application. Customers can view data analysis reports almost immediately after the lab processes a sample and interprets the results.

The Sinclair Fluid Analysis program will be made available through its broad network of distributors located throughout the organization's 22-state marketing area.
